

Assembly & export

Pick a template, see the assembled document, then export. The pre-export summary is loud but specific: it lists every unsupported claim and gap and links to it. Exporting with warnings takes a second explicit confirm. After export, an outcome prompt feeds the closed loop.

6a Template picker — document preview Org templates on the left, live assembled preview on the right. "Generate executive summary" is the one AI action here.

6b Pre-export summary — warning block Loud but specific: lists the one unsupported claim and the one gap, each linked. Exporting with warnings needs a second explicit confirm.

6c Post-export — outcome prompt Export recorded. The outcome prompt stays until answered; a win queues sections into the promotion queue. This feeds the closed loop.
