

Intake

Start a pursuit, upload sources, review what the Intake agent extracted. Every field carries a source chip; unfound fields get a calm "not found" state, never a guess; human edits drop the chip. Continue to outline is blocked until parsing completes.

1a New pursuit — empty upload zone Create the pursuit, then add sources. Continue is blocked with its reason until a source is parsed.

Queued

Extracted context appears here as each source finishes parsing.

1c Parsed context — source chips, one not-found, one human-edited Every field links to its locator; Budget signals is a calm "not found" with an empty input; Scope was edited by hand and drops its chip.

EXTRACTED CONTEXT

Customer  
Northwind Logistics — regional freight carrier, ~600 trucks, mid-market. Dispatch, telematics, and billing run on three separate systems.  
Discovery call · 00:02:14

Problem  
Manual load reconciliation across systems is the biggest drag on turnaround; errors surface only after loads are late.  
Discovery call · 00:09:41

Scope  
Dispatch consolidation first, then billing. Telematics integration in phase two. EDI connections preserved, not rebuilt.  
Edited by you

Budget signals  
No budget signal was found. Add one if you have it — left blank otherwise.  
Not found in sources

Stakeholders  
Dana Ruiz (VP Operations, economic buyer) · Marcus Feld (Dispatch Lead, champion) · IT to validate EDI.  
SF export · Contacts
