SECTION 04

Implementation & Rollout

Narrative AI drafted this section

Shaped by 3 locked themes - every claim cited from your library - review before inserting

Regenerate

Implementation begins with a two-week discovery and data-mapping sprint, aligning your existing EDI and telematics feeds to the platform schema so nothing has to be re-keyed. A phased rollout follows — dispatch first, then billing — so your team adopts one workflow at a time.

Most mid-market carriers reach full production within six weeks, with a dedicated onboarding lead through go-live and no interruption to active loads. Existing integrations are preserved and re-pointed, not rebuilt.

SECTION 03

Proposed Solution

3 claims verified

Show claims

Status: In review

Northwind's dispatch team reconciles load assignments across three disconnected systems today — a workflow your operations lead called the single biggest drag on turnaround time.

Our platform consolidates dispatch, telematics, and billing into one workspace, cutting manual reconciliation by an average of 40% across comparable mid-market carriers.

Case Study — Ridgeline Carriers

0-3 12

Verified

"Ridgeline cut manual load reconciliation by 41% within the first quarter of deployment, freeing two dispatchers for exception handling."

Open source Re-verify

Rollout typically completes within six weeks, with no disruption to your existing EDI connections.

14 Gap marker + one stale claim Calm amber gap chip with one active; neutral re-check chip on the edited claim.

SECTION 02

Understanding Your Challenges

Show claims

Status: In review

1 evidence gap 1 claim to re-check

Freight volumes have grown 22% year over year Re-check, but headcount in your dispatch center has stayed flat — a widening gap between demand and the people managing it.

This mismatch shows up most acutely during the Monday-morning surge, when

no supporting evidence found in library Find evidence the wait for load assignment stretches well past your service target.

Manual exception handling compounds the delay, and errors tend to surface only after a load is already late — turning a scheduling problem into a customer-facing one.
