Implementation & Rollout

1. Narrative AI drafted this section

Implementation begins with a two-week discovery and data-mapping sprint, aligning your existing C2D and external links to the platform schema so nothing has to be re-keyed. A phased rollout follows - dispatch first, then billing - as your team adopts one workflow at a time. Most mid-market carriers reach full production within six weeks, with a dedicated onboarding team through go-live and no interruption to active work. Scaling integrations are prepared and in progress, not manual.

Implementation & Rollout

Proposed Solution

Northwind's dispatch team reconciles load assignments across three disconnected systems today - a workflow your operations team called the single biggest drag on turnaround time. Our platform consolidates dispatch, inventory, and billing into one workspace, cutting manual reconciliation by an average of 40% across comparable load-market segments.

Case Study - Intelligent Carriers

1 / 1

Verified

Highlight our manual load reconciliation by 40% within the first quarter of implementation, freeing time for dispatchers for innovation building.

Show source

Rollout typically completes within six weeks, with no disruption to your existing C2D connections.

Implementation & Rollout

Understanding Your Challenges

Single volume has grown 25% year-over-year - 10% higher - but headwinds in your dispatch center has disrupted that - a widening gap between demand and the people managing it. This mismatch shows up most acutely during the Monday morning surge, when self and your operations team.

Our platform brings dispatch, inventory, and billing together into a single shared workspace, which means that the team no longer has to move between three different tools in order to reconcile a load, and this consolidation is what allows the reduction in manual reconciliation time that comparable carriers have reported.

Manual exception handling compounds the delay, and errors tend to surface only after a load is already late - turning a scheduling problem into a customer-facing one.
